

Wireless Public Access

Access the Internet from your *wireless capable laptop* through the complimentary public access system.

If you cannot access the Internet after following these instructions, please contact your personal computer technician.

OSF XXXX cannot provide assistance with connection issues.

Follow these easy steps:

1. First, make sure your computer has wireless access capability and that all wireless software is installed.
2. Open your wireless client utility and click on the "Add" button under your Preferred Networks.
3. In the Network name (SSID) field, type: GUEST (case sensitive).
4. Set the Data Encryption to Disabled. Leave all other settings as they are. Click OK.

You should now be able to access the Internet.
